positive regulation of hippo signaling regulation of transforming growth factor beta receptor signaling pathway cell surface receptor protein serine/threonine kinase signaling pathway regulation of hippo signaling actin-mediated cell contraction hippo signaling regulation of smooth muscle cell proliferation transforming growth-factor beta receptor superfamily signaling pathway cell adhesion mediated by integrin BMP signaling pathway smooth muscle cell migration intrinsic apoptotic signaling pathway neuron cell-cell adhesion positive regulation of smooth muscle cell proliferation positive regulation of protein ubiquitination regulation of smooth muscle cell migration negative regulation of hippo signaling regulation of G protein-coupled receptor signaling pathway integrin-mediated signaling pathway transforming growth factor beta receptor signaling pathway microtubule cytoskeleton organization involved in mitosis regulation of transmembrane receptor protein serine/threonine kinase signaling pathway blood vessel endothelial cell differentiation smooth muscle contraction cell-matrix adhesion endothelial cell differentiation substrate adhesion-dependent cell spreading actin filament_based movement nuclear receptor-mediated signaling pathway regulation of focal adhesion assembly positive regulation of smooth muscle cell migration cell-substrate adhesion positive regulation of MAPK cascade vascular process in circulatory system regulation of calcineurin-NFAT signaling cascade negative regulation of cell-substrate adhesion progesterone receptor signaling pathway positive regulation of cell adhesion negative regulation of cell-matrix adhesion phospholipid biosynthetic process glutamate receptor signaling pathway regulation of cell-substrate adhesion steroid hormone receptor signaling pathway intracellular receptor signaling pathway regulation of protein ubiquitination negative regulation of cell adhesion proteasome-mediated ubiquitin-dependent protein catabolic process endothelial cell development focal adhesion assembly endothelium development regulation of cell-matrix adhesion nuclear receptor-mediated steroid hormone signaling pathway zinc ion transport canonical Wnt signaling pathway regulation of calcineurin-mediated signaling TORC2 signaling protein polyubiquitination fibroblast growth factor receptor signaling pathway non-canonical Wnt signaling pathway hormone-mediated signaling pathway homophilic cell adhesion via plasma membrane adhesion molecules regulation of non-canonical Wnt signaling pathway endoplasmic reticulum to Golgi vesicle-mediated transport calcineurin-mediated signaling negative regulation of Wnt signaling pathway platelet-derived growth factor receptor signaling pathway Wnt signaling pathway cell-cell adhesion via plasma-membrane adhesion molecules epidermal growth factor receptor signaling pathway Wnt signaling pathway, planar cell polarity pathway positive regulation of Wnt signaling pathway vesicle-mediated transport to the plasma membrane positive regulation of canonical Wnt signaling pathway transition metal ion transport response to calcium ion regulation of neurotransmitter transport Golgi vesicle transport zinc ion transmembrane transport synaptic membrane adhesion Golgi to plasma membrane transport peroxisomal membrane transport dicarboxylic acid transport regulation of canonical Wnt signaling pathway regulation of Wnt signaling pathway regulation of TOR signaling regulation of protein K63-linked ubiquitination vesicle-mediated transport in synapse synaptic vesicle transport post-Golgi vesicle-mediated transport ephrin receptor signaling pathway ERBB signaling pathway protein deubiquitination regulation of early endosome to late endosome transport neurotransmitter transport intracellular protein transmembrane transport acidic amino acid transport regulation of TORC1 signaling response to insulin ERBB2 signaling pathway positive regulation of D-glucose transmembrane transport peroxisomal transport TORC1 signaling cAMP-mediated signaling cellular response to insulin stimulus membrane lipid biosynthetic process nucleocytoplasmic transport regulation of insulin receptor signaling pathway positive regulation of nucleocytoplasmic transport early endosome to late endosome transport regulation of cellular response to insulin stimulus positive regulation of transmembrane transport sphingomyelin biosynthetic process nuclear transport TOR signaling regulation of intracellular transport regulation of D-glucose transmembrane transport insulin-like growth factor receptor signaling pathway regulation of actin filament length insulin receptor signaling pathway sphingolipid biosynthetic process regulation of actin polymerization or depolymerization regulation of monoatomic cation transmembrane transport regulation of microtubule cytoskeleton organization actin polymerization or depolymerization negative regulation of intracellular transport calcium ion homeostasis regulation of protein transport regulation of monoatomic ion transmembrane transport regulation of actin filament polymerization negative regulation of transmembrane transport regulation of transmembrane transport positive regulation of cytoskeleton organization negative regulation of actin filament depolymerization regulation of cytosolic calcium ion concentration actin filament organization negative regulation of transport negative regulation of cytoskeleton organization regulation of nucleocytoplasmic transport intracellular calcium ion homeostasis regulation of actin filament depolymerization regulation of actin filament-based process actin filament polymerization negative regulation of cation transmembrane transport actin filament depolymerization negative regulation of monoatomic ion transmembrane transport
